

# WM1259

| General Information            |              |
|--------------------------------|--------------|
| Adaptation/Agroecological zone | Mid-Altitude |
| Number of years in NPT         | One          |
| Hybrid Type:                   | Single Cross |

| Biotic Stress Performance |               |
|---------------------------|---------------|
| Northern Corn Leaf Blight | Unestablished |
| Grey leaf spot            | Unestablished |
| Maize Streak Virus        | Unestablished |

| Agronomic Characteristics         |            |
|-----------------------------------|------------|
| Maturity (DAP)                    | 131        |
| Grain yield (t/ha) (Opt/Drought*) | 9.2/3.3    |
| Plant height (cm)                 | 210        |
| Ear height (cm)                   | 115        |
| Husk Cover (1=good;9=poor)        | 3          |
| Grain Texture                     | Flint-Dent |
| Anther-Silking Interval (Days)    | 3.6        |

| Abiotic Stress Performance |         |
|----------------------------|---------|
| Drought                    | Good    |
| Low Nitrogen               | Unknown |

| Key Strengths |   |
|---------------|---|
| ★             | Good yield under moderate water stress. |
| ★             | Adaptability                            |
| ★             | Exceptional uniformity of ear           |

\*Moderate drought conditions
